1. Executive Summary

Today's manufacturing organizations operate in an increasingly demanding environment, where achieving operational excellence requires much more than efficient processes, advanced technologies and well-defined procedures. Sustainable performance depends on the quality of leadership demonstrated every day by those closest to the production floor.

Production Supervisors and Team Leaders play a critical role in shaping the daily experience of operators. Through their communication, decision-making, coaching and problem-solving, they influence employee engagement, collaboration, accountability, continuous improvement and operational performance.

Recognizing the strategic importance of frontline leadership, SQALLI PRO proposes the Production Leadership Excellence Journey™, an integrated leadership development initiative designed to strengthen the leadership capabilities of Production Supervisors and Team Leaders while fostering a shared leadership culture across the Production organization.

Rather than viewing leadership development as a series of training sessions, this journey combines interactive learning, workplace practice, coaching, peer learning and reflection to ensure that new leadership behaviors are translated into everyday management practices. Participants will work on real situations from their production environment, allowing learning to generate immediate value for both individuals and the organization.

The program is built upon the internationally recognized Emotional Intelligence framework developed by Daniel Goleman and the Emotional and Social Competency Inventory (ESCI) developed by Korn Ferry. Throughout this proposal this evidence-based model is presented as the Leadership Competency Framework, emphasizing practical leadership behaviors that support communication, coaching, motivation, conflict management, performance management and employee development.

Ultimately, the ambition of this journey extends beyond developing individual leaders. It aims to establish a common leadership culture that enables supervisors and team leaders to create engaged teams, strengthen accountability, develop people, improve collaboration and contribute to sustainable operational excellence.

2. The Frontline Leadership Challenge

Manufacturing organizations operate in an increasingly demanding environment characterized by higher customer expectations, growing operational complexity, workforce challenges and continuous improvement initiatives. While organizations continue to invest in technology, equipment, production systems and operational processes, experience consistently demonstrates that sustainable operational excellence depends not only on the effectiveness of these systems, but also on the quality of leadership that brings them to life every day.

Production Supervisors and Team Leaders occupy a unique position within the organization. They translate strategic objectives into daily actions while coordinating people, maintaining operational discipline and creating the working environment experienced by operators every day.

Today's frontline leaders are expected to go far beyond technical supervision. In addition to achieving production objectives, they must communicate effectively, build trust, develop people, foster collaboration, resolve conflicts, encourage accountability and support continuous improvement.

These increasing expectations require leaders to balance multiple responsibilities simultaneously while maintaining engagement, motivation and operational performance under demanding conditions.

Although every organization has its own reality, Production Supervisors and Team Leaders frequently encounter challenges such as:

- Communicating production priorities clearly across shifts.
- Organizing daily work while responding to changing operational demands.
- Maintaining team motivation during periods of pressure.
- Providing constructive feedback that supports both performance and development.
- Addressing interpersonal conflicts before they affect collaboration.
- Balancing production targets with employee engagement and wellbeing.
- Developing the autonomy and capabilities of operators.
- Creating consistency in leadership behaviors across different teams and shifts.

These challenges rarely arise from a lack of technical expertise. More often, they require leaders to demonstrate strong communication, emotional self-management, coaching, adaptability and the ability to build trust and accountability within their teams.

For this reason, developing frontline leadership should not be viewed as a standalone training initiative, but as a strategic investment in strengthening the organization's leadership culture and creating the human conditions that enable sustainable operational excellence.

Effective frontline leaders contribute to operational excellence by consistently demonstrating leadership behaviors that:

- Create clarity around priorities and expectations.
- Foster trust and psychological safety.
- Encourage accountability and ownership.
- Develop employees through coaching and constructive feedback.
- Promote collaboration and effective communication.
- Address conflicts constructively.
- Support continuous learning and improvement.
- Create an environment where people feel respected, engaged and motivated to contribute.

These behaviors form the foundation of the SQALLI PRO Leadership Competency Framework presented in this proposal.

3. The Business Case for Leadership Development

Research conducted over the past three decades consistently shows that leaders who communicate effectively, coach people, manage emotions under pressure and build trusting relationships create stronger team climates, higher engagement and better organizational performance.

The Production Leadership Excellence Journey™ is built upon the internationally recognized Emotional Intelligence framework developed by Dr. Daniel Goleman and further validated through the Emotional and Social Competency Inventory (ESCI) developed by Korn Ferry.

While these competencies are often referred to as 'soft skills', their organizational impact is anything but soft. They directly influence how leaders communicate, make decisions, develop people, manage conflict and foster collaboration.

Throughout this proposal these competencies are presented as the Leadership Competency Framework because they translate research into observable leadership behaviors.

3.1. Leadership Competencies Shape Team Climate

The Emotional and Social Competency Inventory (**ESCI**), developed by Korn Ferry and based on the work of Dr. Daniel Goleman, identifies **twelve** emotional and social competencies that distinguish outstanding leadership performance across a wide range of organizations.

Korn Ferry research shows that leaders with strengths across a broader range of these competencies are better able to adapt their leadership style and create positive team climates. They are more likely to foster trust, collaboration, engagement and development, while leaders with fewer demonstrated competencies may rely more heavily on directive approaches.

For Production Supervisors and Team Leaders, this means that strengthening these competencies can improve leadership effectiveness, enhance team climate and support stronger engagement and performance.

3.2. Leadership and Employee Retention

Korn Ferry research also demonstrates a strong relationship between leadership competencies and employee retention. Employees working with leaders who demonstrate stronger emotional and social competencies are more likely to remain engaged and committed.

Employees who planned to stay for at least five years rated their leaders more strongly on several observable competencies, in order: **Coach and mentor**, **Conflict management**, **Inspirational leadership**, Organizational awareness, Achievement orientation, Teamwork, and Empathy. These findings reinforce the importance of frontline leadership in creating an environment where employees feel supported, developed and motivated to remain with the organization.

3.3. What This Means for Your Organization

- Stronger employee engagement
- Better communication and collaboration
- Improved leadership consistency
- Greater employee retention
- Enhanced operational performance
- Development of future leaders

4. Our Leadership Philosophy

At SQALLI PRO, we believe sustainable operational excellence is achieved not only through robust systems and technical expertise but also through the quality of leadership demonstrated every day.

Leadership is reflected in everyday behaviors, not titles. Lasting behavioral change occurs when learning is combined with workplace practice, coaching, reflection and continuous application.

At SQALLI PRO, we believe ...

- Leadership is demonstrated through everyday behaviors, not job titles.
- Trust precedes accountability.
- Every interaction shapes culture.
- People support what they help create.
- Coaching develops autonomy and long-term performance.
- Constructive feedback is an investment in people's growth.
- Great leaders develop future leaders.
- Operational excellence begins with human excellence.

Our Development Philosophy

Learn → Practice → Reflect → Coach → Improve

This continuous cycle ensures that leadership development becomes part of everyday management practice rather than remaining a classroom experience.

5. Our Approach

The Production Leadership Excellence Journey™ is an integrated leadership development initiative designed to strengthen the leadership capabilities of Production Supervisors and Team Leaders while progressively building a shared leadership culture across the Production organization.

Rather than viewing leadership development as a standalone training program, the journey combines learning, coaching, workplace application and continuous reflection to support meaningful behavioral change and long-term organizational impact. Accordingly, every learning experience is directly

connected to participants' daily responsibilities and the operational realities they face on the production floor.

5.1. An Integrated Learning Journey

The Production Leadership Excellence Journey™ combines several complementary learning approaches to maximize both learning transfer and behavioral change.

The journey includes:

- Interactive leadership workshops.
- Practical leadership tools and frameworks.
- Individual and group reflection.
- Leadership Labs™ based on real production situations.
- Workplace leadership experiments between sessions.
- Peer learning and knowledge sharing.
- Coaching and continuous feedback.
- Practical application in participants' daily work.

By combining these elements, participants progressively strengthen their leadership capabilities while immediately applying their learning to real operational challenges.

5.2. A Two-Level Leadership Journey

Recognizing the complementary roles played by Production Supervisors and Team Leaders, the journey is structured around two interconnected development paths.

Phase I – Production Supervisors: Develop the capacity to coach Team Leaders, lead performance, strengthen engagement and create consistent leadership practices.

Phase II – Production Team Leaders: Develop the practical leadership behaviors required to organize daily work, communicate priorities, manage performance and support operator development.

Although each journey has its own learning objectives, both are built upon the same Leadership Competency Framework, creating a common leadership language and consistent leadership behaviors throughout the Production organization.

5.3. Designed for Real Operational Challenges

One of the distinguishing characteristics of the Production Leadership Excellence Journey™ is its practical orientation. Rather than relying exclusively on theoretical case studies, participants will regularly analyze and discuss real situations encountered in their own production environment through Production Leadership Labs™.

These facilitated learning sessions provide opportunities to:

- Reflect on actual leadership challenges.
- Share experiences and good practices.
- Analyze different approaches.
- Apply the Leadership Competency Framework.
- Develop practical solutions.
- Learn collectively from real operational situations.

This approach ensures that learning remains immediately relevant, practical and directly applicable to participants' daily responsibilities.

6. The SQALLI PRO Leadership Competency Framework

The Production Leadership Excellence Journey™ is built upon the internationally recognized **Emotional Intelligence framework** developed by Dr. Daniel Goleman and operationalized through the Emotional and Social Competency Inventory (ESCI) developed by Korn Ferry. The model comprises 12 emotional and social competencies, organized into four complementary leadership dimensions, as illustrated below.

Rather than presenting Emotional Intelligence as a theoretical concept, SQALLI PRO translates this evidence-based framework into a practical Leadership Competency Framework adapted to the daily realities of frontline leaders in production environments.

The framework focuses on the leadership behaviors that supervisors and team leaders demonstrate every day while organizing work, communicating with operators, developing people, managing performance, resolving challenges and creating a positive team climate.

It provides a common leadership language that supports consistency, collaboration and sustainable operational excellence throughout the organization.

6.1. Four Leadership Dimensions

The SQALLI PRO Leadership Competency Framework is organized around four complementary leadership dimensions. Each dimension represents an essential aspect of effective leadership and contributes to the development of high-performing teams.

6.1.1 Know Yourself - Building Self-Awareness

Effective leadership begins with understanding oneself. Leaders who understand their emotions, values, strengths and limitations are better equipped to make thoughtful decisions, respond appropriately under pressure and positively influence those around them.

This dimension focuses on developing:

- Self-awareness
- Personal responsibility
- Leadership identity
- Reflection
- Awareness of one's impact on others

6.1.2 Lead Yourself - Demonstrating Self-Management

Production environments often require leaders to operate under pressure while balancing multiple priorities. This dimension focuses on the ability to manage emotions, remain composed, adapt to changing circumstances and maintain a constructive attitude while achieving operational objectives.

Key competencies include:

- Emotional self-management
- Adaptability
- Achievement orientation
- Positive outlook
- Organization and prioritization
- Resilience

6.1.3 Understand Others - Developing Social Awareness

Successful leaders understand not only operational requirements but also the people responsible for achieving them. This dimension focuses on building empathy, recognizing employee needs, understanding team dynamics and creating an environment where people feel respected, heard and supported.

Key competencies include:

- Empathy
- Active listening
- Organizational awareness
- Understanding employee perspectives
- Building trust

6.1.4 Lead the Team - Building High-Performing Teams

Leadership ultimately becomes visible through relationships. This dimension focuses on the behaviors that enable leaders to communicate effectively, coach employees, provide constructive feedback, manage conflict, motivate teams and create a positive working climate that supports both people and performance.

Key competencies include:

- Effective communication
- Coaching and mentoring
- Constructive feedback
- Conflict management
- Influence
- Teamwork
- Developing people
- Inspiring performance

6.2. Leadership Competencies in Action

These four leadership dimensions are not developed independently. They reinforce one another and collectively enable leaders to demonstrate behaviors that contribute to stronger team performance and sustainable operational excellence.

Throughout the Production Leadership Excellence Journey™, participants will progressively strengthen these competencies through practical learning experiences, coaching, workplace application and reflection, allowing leadership behaviors to become part of their everyday management practice.

6.3. From Competencies to Leadership Behaviors

The objective of the Leadership Competency Framework is not simply to increase participants' knowledge of leadership concepts. Its purpose is to translate leadership competencies into observable behaviors that contribute to improved operational performance.

Examples include:

Leadership Competency	Observable Leadership Behaviors
Know Yourself	Demonstrates self-awareness, accepts feedback, acts with consistency.
Lead Yourself	Maintains composure under pressure, adapts to change, organizes work effectively.
Understand Others	Listens actively, demonstrates empathy, understands operator concerns.
Lead the Team	Coaches employees, communicates clearly, resolves conflicts, develops autonomy, recognizes performance.

These behaviors represent the practical expression of the Leadership Competency Framework and provide the foundation for the learning experiences described throughout this proposal.

7. Leadership Development Journey

7.1. Leadership Journey I - Developing Production Supervisors

Production Supervisors play a pivotal role in translating organizational objectives into operational results while shaping the leadership culture experienced by Production Team Leaders and operators every day.

Beyond coordinating production activities, they are expected to lead people, develop future leaders, foster collaboration, manage performance and create an environment where employees remain engaged, motivated and committed to achieving shared goals.

Recognizing this strategic responsibility, the Supervisors Leadership Journey is designed to strengthen the leadership competencies that enable supervisors to lead people effectively while contributing to sustainable operational excellence.

Grounded in the SQALLI PRO Leadership Competency Framework, the journey combines practical learning, workplace application, coaching and reflection to help participants progressively strengthen their leadership practice and confidently address the everyday challenges of leading frontline teams.

7.1.1 Learning Objectives

By the end of the journey, participants will be better equipped to:

- Demonstrate greater self-awareness and leadership confidence.
- Lead with greater composure and adaptability in demanding operational environments.
- Communicate expectations and production priorities with clarity and consistency.
- Foster trust, engagement and accountability within their teams.
- Coach and develop Team Leaders through constructive feedback and ongoing support.
- Address interpersonal challenges and conflicts effectively.
- Strengthen collaboration across teams and shifts.
- Create an environment that encourages continuous improvement and employee development.
- Contribute to improving employee engagement and reducing turnover through effective leadership practices.

7.1.2 Developing Leadership Competencies in Practice

7.1.2.1 *Know Yourself*

Development focus

- Developing leadership identity.
- Increasing self-awareness.
- Understanding personal leadership impact.
- Reflective leadership practice.

Application

- Leading difficult conversations.
- Receiving feedback.
- Decision-making under pressure.

7.1.2.2 *Lead Yourself*

Development focus

- Emotional regulation.
- Resilience.

- Leading change.
- Achievement mindset.

Application

- Managing operational pressure.
- Supporting change initiatives.
- Prioritizing effectively.

7.1.2.3 Understand Others**Development focus**

- Understanding Team Leaders.
- Organizational awareness.
- Building trust.
- Psychological safety.

Application

- Coaching Team Leaders.
- Active listening.
- Understanding employee engagement.

7.1.2.4 Lead the Team**Development focus**

- Coaching.
- Influence.
- Conflict resolution.
- Team leadership.

Application

- Developing Team Leaders.
- Leading performance discussions.
- Building collaboration across shifts.
- Supporting continuous improvement.

7.1.3 Implementation Approach

The Supervisor Journey is proposed as:

- **Target audience:** Production Supervisors
- **Number of participants:** Approximately 10
- **Format:** One full-day session every two weeks
- **Duration:** Eight learning sessions (4 months)
- **Approach:** Interactive learning, coaching, workplace application and continuous reflection

7.1.4 What Success Looks Like

At the conclusion of this journey, Production Supervisors will not simply have attended a leadership program. They will have strengthened the leadership behaviors required to coach their teams, communicate with confidence, develop people, foster engagement and contribute to a consistent leadership culture across the Production organization.

7.2. Leadership Journey II - Developing Production Team Leaders

Production Team Leaders are the leaders closest to the production floor, where organizational objectives become everyday actions. They coordinate operators, communicate priorities, organize daily work, monitor performance and respond to the challenges that arise throughout each shift.

As the primary point of contact for operators, Team Leaders shape the daily work experience of their teams. Through the way they communicate, provide feedback, resolve problems and support employees, they have a direct influence on engagement, collaboration, accountability and operational performance.

Recognizing the critical role they play in sustaining both performance and culture, the Production Team Leaders Journey is designed to strengthen the practical leadership competencies required to lead people with confidence, develop operator autonomy and contribute to a safe, collaborative and high-performing work environment.

This journey combines practical learning, workplace application, coaching and reflection to help Team Leaders progressively strengthen the leadership behaviors that support operational excellence and reinforce the organization's leadership culture.

7.2.1 Learning Objectives

By the end of the journey, participants will be better equipped to:

- Understand and embrace the role and responsibilities of a Production Team Leader.
- Organize daily work effectively and allocate tasks according to operational priorities.
- Communicate clearly with operators before, during and after production activities.
- Conduct structured and engaging shift briefings.
- Monitor team performance and support the achievement of daily production targets.
- Provide constructive feedback that encourages learning and accountability.
- Motivate operators through recognition, support and effective communication.
- Address everyday conflicts and difficult situations with confidence and respect.
- Solve operational problems collaboratively and escalate issues appropriately.
- Support the development, autonomy and continuous learning of team members.

7.2.2 Developing Leadership Competencies in Practice

7.2.2.1 *Know Yourself*

Development focus

- Self-awareness.
- Personal responsibility.
- Leadership confidence.

Application

- Understanding reactions.
- Improving communication.
- Building credibility.

7.2.2.2 *Lead Yourself*

Development focus

- Managing emotions.
- Adaptability.
- Positive outlook.

Application

- Remaining calm during production issues.
- Managing changing priorities.
- Staying solution-focused.

7.2.2.3 Understand Others**Development focus**

- Empathy.
- Understanding operators.
- Active listening.

Application

- Motivating operators.
- Supporting employee wellbeing.
- Understanding individual needs.

7.2.2.4 Lead the Team**Development focus**

- Communication.
- Feedback.
- Conflict management.
- Coaching.

Application

- Shift briefings.
- Daily task allocation.
- Performance feedback.
- Conflict resolution.
- Developing operator autonomy.

7.2.3 Implementation Approach

The Team Leader Journey is proposed as:

- **Target audience:** Production Team Leaders
- **Number of participants:** Approximately 60
- **Recommended group size:** 12 to 15 participants per cohort
- **Format:** One full-day session every two weeks
- **Duration:** Eight learning sessions (4 months)
- **Approach:** Interactive learning, coaching, workplace application and continuous reflection

7.2.4 What Success Looks Like

At the conclusion of this journey, Production Team Leaders will have strengthened the leadership behaviors required to organize work effectively, communicate with clarity, coach operators, address everyday challenges constructively and contribute to a consistent leadership culture across the Production organization.

7.3. Expected Impact of the Two Leadership Journeys

Together, the two journeys are expected to contribute to:

- Greater leadership consistency across the Production organization.
- Clearer communication and stronger collaboration across teams and shifts.
- More effective coaching, feedback and employee development.
- Greater accountability, ownership and operator autonomy.
- A more positive and engaging working environment.
- Stronger employee retention and development of future leaders.
- Improved readiness for continuous improvement and sustainable operational excellence.

8. A Collaborative Partnership

At SQALLI PRO, we believe that the most effective leadership development initiatives are built with an organization rather than for an organization. While this proposal presents a structured leadership journey grounded in internationally recognized leadership competencies and best practices, we

recognize that every organization has its own culture, operational realities, strategic priorities and leadership challenges.

For this reason, the Production Leadership Excellence Journey™ combines a robust Leadership Competency Framework with the flexibility to adapt learning activities, discussions, Leadership Labs™ and workplace applications to the organization's specific context. This ensures that the learning experience remains practical, relevant and directly connected to the realities of the production environment.

Throughout the journey, participants will strengthen their leadership practice through workplace application, self-reflection, facilitator observations and feedback from relevant managers, enabling learning to evolve continuously rather than being confined to the classroom.

Beyond delivering a successful development program, our ambition is to help the organization strengthen its leadership culture, encourage continuous learning and support the long-term development of its frontline leaders.

9. Conclusion

The Production Leadership Excellence Journey™ represents an investment not only in developing individual leaders, but also in strengthening the leadership culture that supports sustainable operational excellence. Our ambition is to help create an environment where Production Supervisors and Team Leaders consistently:

- Lead with confidence and integrity.
- Communicate with clarity and purpose.
- Coach and develop their people.
- Foster trust, collaboration and accountability.
- Inspire continuous learning and improvement.
- Create the conditions for sustainable operational excellence.

By strengthening the leadership capabilities of those closest to the production floor, the organization lays the foundation for stronger teams, greater employee engagement and a culture where people and performance can thrive together. We look forward to partnering with you on this journey.

Appendix A - Financial Offer

The investment proposed by SQALLI PRO for the different programs is as follows:

Program	Price DH No Tax	Price DH Including Tax
Leadership Journey I - Developing Production Supervisors 8 full-day sessions in person, for a group of 10 people	80 000,00	96 000,00
Leadership Journey II - Developing Production Team Leaders 8 full-day sessions in person, for one cohort of 12-15 people	80 000,00	96 000,00

NB: Professional fees exclude travel and accommodation expenses.

Appendix B – Lead Consultant

Dr. Mohammed Sqalli Houssaini is an executive leadership coach. He has extensive experience supporting leaders, executive teams, and public and private organizations, both in Morocco and internationally. His approach integrates individual coaching, team coaching, and organizational coaching through a systemic methodology aimed at strengthening individual and collective performance, as well as achieving strategic alignment among stakeholders.

A franchisee of Leadership Management International (LMI), Dr. Sqalli is a Certified Facilitator by Adding Zeros, a Certified Practitioner in Team Coaching by the Global Team Coaching Institute (GTCI), a Certified Professional Coach (CPC), and an Energy Leadership Index – Master Practitioner (ELI-MP) certified by iPEC (Institute for Professional Excellence in Coaching). He is also a member of the Board of Directors of CorpsAfrica Morocco.

Dr. Sqalli has a Ph.D. in Engineering - Systems Design and a Master's in Computer Science, both from the University of New Hampshire (UNH) in the USA. He also obtained the degree of “Ingénieur d’Etat” in Computer Science from the “Ecole Mohammadia d’Ingénieurs” in Rabat, Morocco. He is the recipient of a four-year Fulbright Scholarship and two Excellence Awards in Teaching and Academic Advising. He has one patent registered in the USA and has supervised a number of PhD and MS students. Dr. Sqalli has more than 30 years of experience in various positions, in Morocco, the United States, Canada, and Saudi Arabia.

Appendix C - Selected Testimonials

“Mr. Sqalli is an experienced professor and a certified coach with many years of experience across different continents. I had the opportunity to attend one of his Emotional Intelligence training programs. I was very satisfied with the quality of the training as well as the follow-up, particularly through the actions and activities during and after each session to reinforce learning. He has all the required skills to lead this type of program. I would not hesitate to participate in other training programs he offers for the Vivo Energy team.” — Nisrine Saati, PMP®, MBA, Africa Business Effectiveness Manager & C4C CRM Lead, Vivo Energy Africa Services, Morocco.

“Mr. Mohammed Sqalli Houssaini is an outstanding professional with remarkable skills in stress management, emotional intelligence, and leadership. I am confident that he will continue to excel and make a significant contribution wherever he applies his expertise.” — Youssef M., Senior Business Manager, Real Estate and Hospitality, Bank Of Africa, Morocco.

“I highly recommend coach and trainer Mr. Mohammed Sqalli Houssaini, who supported me throughout an 8-week training cycle on emotional and relational intelligence. Mr. Sqalli greatly contributed to my personal and professional development and is one of the people who will leave a lifelong mark on me. I am delighted to warmly recommend Mr. Sqalli to anyone who wishes to experience a memorable and transformative human journey.” — Najoua Zaari, Head of Loyalty & Digital at Vivo Energy Morocco (Shell Licensee in Africa).

“Mohammed is one of the most dynamic and professional coaches I have ever met. His knowledge and the way he led the sessions exceeded my expectations. I will certainly call on him again for the next program.” — Jonas Roldan, Financial Controller at Air Liquide, Saudi Arabia.

Appendix D - About SQALLI PRO

SQALLI PRO, founded in 2014, specializes in supporting leaders, managers, and teams through leadership, professional development, and collective performance programs. It works with public and private organizations, in Morocco and internationally, using a structured, human-centered, and results-oriented approach.

Since 2014, SQALLI PRO has been a franchisee of the international company Leadership Management International (LMI). In this capacity, it delivers the “Total Leader®” programs developed by LMI, aimed at strengthening individual and organizational performance.

Between 2017 and 2020, SQALLI PRO expanded its offering by developing and integrating several complementary programs, including:

- Energy Leadership™, dedicated to supporting leaders and professionals in managing energy, engagement, and leadership posture;
- Emotional intelligence programs, designed to strengthen team cohesion, communication, and performance;
- The Adding Zeros program, intended for executive teams, with the objective of aligning the entire organization around five key disciplines: Mission, Strategy, People, Business Development, and Execution.

In addition to these structured programs, SQALLI PRO organizes workshops, seminars, and team-building events on themes such as success, motivation, leadership, and emotional intelligence.

SQALLI PRO also offers the “Making of a Champion®” program, designed for young people aged 15 to 25, aimed at developing their personal skills, self-confidence, and leadership potential.

Appendix E - Selected Clients

Over the years, SQALLI PRO has supported numerous teams (Executive Committees, divisions, departments, etc.) within public and private organizations, in Morocco and internationally, including: Vivo Energy Africa Services (Africa), EUNEP (Austria), DAMAC (United Arab Emirates), VitalAire – Air Liquide (Saudi Arabia), King Abdullah University of Science and Technology (KAUST) (Saudi Arabia), Pat & Max Limited (Trinidad and Tobago), CGEM, Bank of Africa (BMCE Group) Academy, Vivo Energy Morocco, Lesieur Cristal, STMicroelectronics, L’Oréal, SOGEM Morocco, Autoroutes du Maroc (ADM), Nexans Morocco, Safi Energy Company (SAFIEC), EMB Morocco, Global Infrastructure Development North Africa (GIDNA), Groupe NEGACH, MASCIR, Mohammed VI Polytechnic University (UM6P), the Ministry of Endowments and Islamic Affairs, and the Ministry of National Territorial Planning, Urban Planning, Housing, and City Policy.
